Compiles and run, but gives the wrong answer, because the temporary ring does not have the homogenizing indeterminate!
There are many functions constructing the "working ring", but it's a mess: I need John to help me designing a cleaner interface.

Renamed the functions from SATGBasis to GBasisSelfSat.
Added to CoCoA-5 (for easier debugging).

Understood (probably) what the interface was meant to be.
Written test code, seems to work well :-)

Final interreduction needed.

No hope to make this in time for 0.99720 (requires too much planning)
