History

#1 - 25 Sep 2019 18:15 - John Abbott

Here is a list of apparently redundant files:

- assert.cocoa5
- TBC

- Related to Support #1311: THINGS TO DO IN GENOVA September 2019 added

#3 - 27 Sep 2019 18:09 - John Abbott

- Status changed from New to Resolved

- % Done changed from 0 to 80

Here are the tests which we might want to keep:

- **packages.cocoa5**
- **parameters.cocoa5**
- **protection.cocoa5**
- **tagging.cocoa5**

The others have either been deleted (mostly the old ones from 2010), or added to the Makefile.

Some **TutHokkaido** tests fail (non-zero exit status in 3 cases).

test-output.cocoa5 fails with "wrong output" ???

If run inside emacs using C-c C-f, the test produces no output; but if run as a command line arg, it seems to produce a blank line. Odd!!

Marked some tests as **INACTIVE** (by changing file name); Anna thinks it is best to keep these tests around, in case we ever delve into the interpreter.

I activated tagging.cocoa5 (because it was easy to activate).
