Target version:	CoCoA-5.4.2	Spent time:	1.45 hour
Description The first time I use the online manual in CoCoA-5, I always get a warning about the operators, shortcuts page being out of order. It would be nice to resolve this... it looks "unprofessional". Also that manual page is long and hard to read/comprehend. Might it be better to make the page into a tutorial? I also noticed that only < is present, while <= and > and >= are absent.

I have added <= and > and >= to the list at the top of the page.

I also noticed that there appears to be a mess regarding arg types and return types; this should be tidied up.

I would like there to be quite a short page about operators, perhaps just with links to other pages where more details are given. I find the current page too long and hard to digest.

The standard arithmetic operators were not listed (plus, minus, times, divide, power). Maybe others too? We should check!

Fixing this properly will likely take lots of time; I suggest postponing.

I suggest breaking the page into subsections (or even splitting it into more than one page?): e.g. comparison operators, arithmetic operators, list ctors, etc.

- Description updated

We need to review the purpose of this manual entry.

Maybe it should have little content, but simply refer to other manual pages. We can have shorter pages about sensible groupings of operators:

- equality and not-equality
- order comparisons
- assignment (normal and for rings)
- indexing operators (lists, matrices, records, strings)
- arithmetic operators
- others(???)
