

CoCoALib - Bug #1449

Bivariate factor bug: sometimes a factor is reducible

20 Apr 2020 13:54 - John Abbott

Status:	Closed	Start date:	20 Apr 2020
Priority:	Urgent	Due date:	
Assignee:	John Abbott	% Done:	100%
Category:	Maths Bugs	Estimated time:	5.99 hours
Target version:	CoCoALib-0.99710	Spent time:	5.85 hours
Description The following code prints out some faulty (<i>i.e.</i> not irred) factorizations: <pre>use QQ[x,y]; p1 := (x+y)*(500*y^8 +400*y^7*x +1283*y^6*x^2 +2620*y^5*x^3 +2474*y^4*x^4 +2620*y^3*x^5 +1283*y^2*x^6 +400*y*x^7 +500*x^8 -10800*y^6 -18144*y^5*x -29808*y^4*x^2 -44928*y^3*x^3 -29808*y^2*x^4 -18144*y*x^5 -10800*x^6 +85968*y^4 +177984*y^3*x +184032*y^2*x^2 +177984*y*x^3 +85968*x^4 -297216*y^2 -501120*y*x -297216*x^2 +373248); for j := 1 to 100 do facs := factor(p1); if len(facs.multiplicities) <> 3 then println [j,facs]; endif; endfor;</pre> Reported by Jasper Nalbach (from Aachen)

History

#1 - 20 Apr 2020 13:56 - John Abbott

I have simplified slightly the problem (from what Nalbach reported by email).

About 7% of calls gave a wrong result (after running a loop with 1000 iters).
Almost certainly an "unlucky random number" (but that should never happen...)

#2 - 20 Apr 2020 15:32 - John Abbott

- Status changed from New to In Progress
- Assignee set to John Abbott
- % Done changed from 0 to 10

Here is a simpler failing example:

```
p1 := (x+y)*(2*x^2 +x*y +2*y^2 -12)*(120*x^6 +250*y^6 +168*x*y -104);
```

I'll try making it simpler still. If I set coeffs of x^6 and y^6 both to 1 then it seems to work fine...

#3 - 21 Apr 2020 10:18 - John Abbott

Here is a simpler example:

```
p1 := (x+y)*(x^2 +y^2)*(2*x^6 +y^6 +2);
```

I have tried reducing the exponent 6 but without success (*i.e.* the factorization comes out right).

This is probably simple enough that I should now start the hard phase... 8-{

#4 - 22 Apr 2020 21:57 - John Abbott

- % *Done changed from 10 to 20*

The problem is in the **univariate** factorizer (ouch!)

```
use QQ[x,y];
jj := (x+41)*(x^2+41^2)*(2*x^6+41^6+2); // subst(p1,y,41);
factor(jj); --> only 2 factors!!
```

```
p1 := (x+y)*(x^2 +y^2)*(2*x^6 +y^6+2);
subst(p1,y,37); // or -37, also goes wrong
subst(p1,y,41); // or -41, also goes wrong
```

[...]

I confirm on my Mac: 2 factors :-(

#6 - 24 Apr 2020 15:53 - John Abbott

- % Done changed from 20 to 30

I have found a bug... not yet sure how to fix it. :-/

The crucial line is around DUPZfactor_combine.c:315; the value of max_tuple_size can be incorrectly set to THIS->nfactors/2.

We have modular factors of degs 1,1,1,6, and have just found a linear factor; so remaining modular factors have degs 1,1,6, and for some reason the code thinks the search does not need to consider 2-tuples... logic error!

Here is a simpler univariate problem poly:

```
f := (x+41) * (x^2+41^2) * (2*x^6+1608941);
```

#7 - 24 Apr 2020 16:36 - John Abbott

- % Done changed from 30 to 40

Here is an even simpler example:

```
f := (x+11) * (x^2+11^2) * (2*x^4+235885);
```

```
f := (x+11) * (x^2+1) * (2*x^4+235771); -- 2*x^7 +22*x^6 +2*x^5 +22*x^4 +235771*x^3 +2593481*x^2 +235771*x +2593481
```

And some even simpler examples:

```
flist := [(x+11) * (x^2+1) * (x^4+n) | n in [21458,21469,21470,21484,21496,21497]];
```

UPDATE I did a "quick" search for bad polys of the form $(x+m)(x^2+1)(n_1x^3+n_2)$ but found none (for $m=11,\dots,20$, $n_1=1,\dots,10$ and $n_2=1,\dots,250000$)

#8 - 24 Apr 2020 20:43 - John Abbott

- *Status changed from In Progress to Resolved*
- *% Done changed from 40 to 70*

I has disabled the dodgy looking short-cut, and now several tests (incl. the original example) have worked just fine.

I guess that ancient factorizer code needs to be brought up to date... sigh!

#9 - 25 Apr 2020 14:31 - John Abbott

- *Status changed from Resolved to Feedback*
- *% Done changed from 70 to 90*
- *Estimated time set to 5.55 h*

I have done some ad hoc testing; seems OK.

Checked in; incr version number of CoCoALib (CoCoA-5 too).

ANNA: Could you check on you machine? Thanks.

#10 - 26 Apr 2020 19:43 - John Abbott

Added test to exbugs.cocoa5.

#11 - 26 Apr 2020 19:57 - John Abbott

- *Estimated time changed from 5.55 h to 5.99 h*

Added test to src/tests/test-bug1.C

#12 - 29 Apr 2020 12:43 - John Abbott

- *Related to Support #1338: Release CoCoALib-0.99700 added*

#13 - 29 Apr 2020 12:43 - John Abbott

- *Target version changed from CoCoALib-0.99800 to CoCoALib-0.99700*
