Here are some notes about the MacOS (hidden) release:

- inside CoCoA-5.3/CoCoAManual/ there are Makefile and README; is this intentional?
- inside .../CoCoAManual/html/ there is a file with a strange name **cmdPrevPrimePrevProbPrime.htmlcmdPrevPrimePrevProbPrime.html**; looks wrong!
- inside .../CoCoAManual/html the filenames containing [OBSOLETE] or [OBSOLESCE] are a bit awkward (apparently allowed in URIs, though)

Otherwise seems fine (e.g. file perms)
