CoCoA Manual: homogenize obsolete/obsolescent entries

Description I'm cleaning the manual for a homogeous straightforward style for obsolete/obsolescent entries. Mainly it should just give a link to the replacement function (and say if it's a simple renaming), or explain why it's obsolete and/or how to replace the call in the best way.

The section "see also" is handy only for the online version.
Remove them.

Think of an easy way to call the manual on a string in the EmacsUI from the **cocoa5** buffer.

This is how the renamed ones should look like

```
<!-- ===  COMMAND  ===== -->
<command>
  <title>AffPoincare [OBSOLESCE]</title>
  <short_description>[OBSOLESCE] Renamed AffHilbertSeries</short_description>
<description>
Renamed <tref>AffHilbertSeries</tref>.

The release/date is now shown when the function is called (see obsoloscent.cpkg5) for both obsolete and obsolescent functions.

1 - obsoloscent.cpkg5 is easier to maintain up-to-date because less tedious to do.

2 - Moreover the user is more likely to read an error/warning message than the manual, especially when the message says "this was changed a looong time ago" ;-)

Duplicating info is usually a bad idea, so I would not care much about adding the obsolescence-year in the manual.
