

CoCoA-5 - Design #1554

cocoa5-emacs-dir or cocoa5-root-dir?

18 Dec 2020 17:22 - John Abbott

Status:	Closed	Start date:	18 Dec 2020

Target version:	CoCoA-5.4.0	Spent time:	1.25 hour
Description In the emacs initialization lines we define cocoa5-emacs-dir . Why do we not define cocoa5-root-dir instead? Then we can specify all paths without using .. (dot-dot).			

History

It seems more natural to me to specify the path to the "root" directory; then all accesses to files are "downward".

Is there a good reason to specify instead the path to the emacs subdirectory?

BTW in the commented out lines for Microsoft, the path to the packages is also defined... is that necessary?

Anna points out that there are complications on Microsoft where one cannot be entirely sure where the release is unpacked into. For example, it may unpack into **C:/bla/bla/cocoa-5.3/cocoa-5.3/CoCoA-files** (rather than having a single cocoa-5.3 in the path). When giving instruction about which path to copy, it is easier to refer to the emacs subdir than allow ambiguity when refering to cocoa-5.3.

#3 - 22 Dec 2020 15:36 - John Abbott

The question arose after an email from Alasdair McAndrew (around 2020-12-18). Anna will investigate.

#4 - 02 Mar 2021 07:56 - John Abbott

What is the status of this issue?

The file cocoa5.emacs defines cocoa-root-dir in terms of cocoa5-emacs-dir near the start, then uses cocoa5-root-dir thereafter (and never refers to cocoa-emacs-dir again).

Can we progress to feedback?
Has email been sent to the original person who raised the matter?
