| Description The manual entries in CoCoAHelp.xml include a collection of the types involved. What convention should be used for the names of these types? For instance the fn abs lists as its types integer , rat and ringlem . Decide a convention, and apply it (as uniformly as possible). <ul style="list-style-type: none">2019-10 ** here it is (this allows generating manual page with all functions returning INT, RAT, ...) <pre><syntax> abs (N: <type>INT</type>) : <rtn>INT</rtn> abs (N: <type>RAT</type>) : <rtn>RAT</rtn> abs (N: <type>RINGELEM</type>) : <rtn>RINGELEM</rtn> </syntax></pre> | | | | | | | | | | | | |
