Description

In the general picture of improving the error codes, I suggest a trivial (though extensive) change.
Look at these names (just a few)

```
NotFreeModule
NotFullRank
NotNonZero
```

We have many times discussed that from the code/name of the error it's not obvious if you want the object to be, say, full rank or the opposite.
I propose to change such codes into

```
ReqFreeModule
ReqFullRank
ReqNonZero
```
