Description			
<p>Se prepari un file con CoCoA-5, lo salvi, quindi CoCoA-5 e imponi al file di aprirsi (open with) con CoCoA-5, quando lo clicchi apre effettivamente CoCoA-5, ma non il file stesso. (MacOS) R. ----- AMB: does that happen in other OSs?</p>

I sometimes have a similar problem with Firefox: if I double click on a *.html file and Firefox was not already running, Firefox starts but shows my default start page and not the file I clicked on.

I fear it needs a proper MacOSX wizard to solve this one.
