CoCoA-5 - Bug #468

Emacs UI: indentation is wrong after ?keyword

12 Mar 2014 12:52 - John Abbott

Description

I have identified one case where indentation in a cocoa5 file goes wrong.
I have checked that C-c C-e is confused too.

The file contained the line

```
? Foreach
```

after that line indentation was wrong (as though the code were inside a Foreach block :-))

Modify the emacs UI code so that keywords are ignored when appearing after a ? (the same way they are ignored in strings and comments)

History

Recall that ? simply has to be the first non-space character in a command (and not the first non-space character on a line). So I believe we can treat ? in much the same way as -- (rest of line comment)

I have given this low priority because I think it is typically quite rare for a cocoa5 file to contain ?keyword as a line (except in a teaching context). Anyway, it would be nice to sort this out sooner or later.

I guess the relevant fn is cocoa5-calculate-indent on line cocoa5.el:716

AARRGHHH it's almost 100 lines long ?

I felt better before looking at this code...
Giving up!
