<b>Target version:</b>	CoCoA-5.1.0 Easter14	<b>Spent time:</b>	2.75 hours
<b>Description</b> We are now encouraging lower case keywords, so the emacs interface must be able to recognise them, colour them, indent them properly.

I cleaned up the keywords definitions. (removed some duplicates, still a few left)  
I had problems with regexps but I think it works now.

To test it disable abbrev-mode. (ESC-x abbrev-mode)  
Then we can also remove the abbrev-table (or just set abbrev-mode off by default)

- Status changed from In Progress to Feedback

Now it should recognize all properly written keywords (**Pri**NT is accepted but not properly written)  
Now there is an entry in the CoCoA-5 menu for toggling on/off Automatic capitalization of keywords (now useless).

- % Done changed from 90 to 100

Works OK; the only remaining question is whether the default should be to capitalize or not. Currently (and for 5.1 release) it capitalizes; we'll try the other for a while and then decide.
