Problem with boost: incompatibility of Qt4 and boost > 1.52.

Recompiled on Mac and on Linux with 1.52 --> OK

Updated instructions for compiling boost (src/CoCoA-5/INSTALL)

Release for Mac and Linux done on friday.

Still problems with windows: after I managed to compile, the local server stopped!!

so I had to postpone the publication.

Then I'll take some time to make more proper tests (no one gives us feedback on windows) and possibly install and compile with readline, which is sooooo nice!

Moreover if I also manage to install pdflatex to the virtual machine I can test the new release script.

#10 - 06 Aug 2015 11:04 - Anna Maria Bigatti

I decided to upload the textual version on windows, and hope to get some feedback....

(meanwhile I keep working on the script for simplifying the release process....)

Apparently the release was made over 6 months ago; can we close this issue?

BTW the CoCoA web site was very slow (I checked only the download page for CoCoA-5).
