Description			
The file src/tests/Makefile_dependencies seems to be suspiciously simple. Either it is wrong or it is pointless. Investigate!

Strictly the tests could depend explicitly on just those header files actually included. In practice this extra dependency info, does not seem to be useful to anyone... if you change a CoCoALib header, the library should be recompiled, and all tests depend on libcocoa.a.

I think it is OK as it stands. Closing.
