Target version:	CoCoALib-1.0	Spent time:	0.00 hour
Description			
<p>The source code for SmallFpDoubleImpl includes its own impl of InvMod which uses double rather than an integral type; there is also a comment saying that the version using double is faster on some platforms.</p> <p>Ideally the code should choose which ever impl is faster for the platform. Can we do this without too much complication?</p>
